SUMMARY

Senior Frontend Engineer with 7+ years building complex, high-quality React applications across multi-tenant SaaS platforms. Deep expertise in component architecture, scalable frontend systems, and cross-functional engineering. Proven track record owning features end-to-end - from Figma to production - with a strong emphasis on rigorous testing, code quality, and developer experience.

SKILLS

AWS, CI/CD, CircleCI, Component Libraries, Cypress, Datadog, Deno, Django, Express, Git, GitHub Actions, Google Analytics, GraphQL, JavaScript, Jest, Kubernetes, Micro-frontend Architecture, Microservices, Multi-tenant Whitelabeling, Next.js, NoSQL, Playwright, Python, React, React Router 7, RESTful API, Segment, Sentry, SQL, TypeScript, Vite, Vitest, Webpack

EXPERIENCE

Sure | Remote | 11/2020 - 03/2026

Senior Engineer II | 02/2024 - 03/2026

Microservices, Deno, Component Library, AI Tooling, Tech Lead

- Served as tech lead overseeing the rollout of 14 new auto insurance states - directly leading 7, including ticket scoping, QA coordination, and go/no-go decisions - while owning architectural decisions on a config-driven state rollout system across multiple whitelabel partners
- Built an internal LLM-powered CLI to build insurance configurations - supporting document creation, file uploads, and attribute-specific generation conditions - significantly accelerating configuration workflows for internal teams
- Drove API and frontend boundary decisions in Document Builder - advocated for backend-owned business logic to eliminate frontend edge cases and reduce integration test complexity
- Maintained the Toggle Design System - a shared, highly flexible component library consumed across all insurance products (auto, renters, homeowners) and 5+ whitelabel partner storefronts
- Mentored mid-level and junior engineers through frequent pair programming, 1,000+ PR reviews, and continuously refined code standards emphasizing test-driven development, feature flagging, and clear documentation

Senior Engineer | 02/2022 - 02/2024

Multi-partner Whitelabeling, Micro-frontend Architecture, CI/CD, Kubernetes, Django, Deno Microservices

- Architected a multi-region / multi-partner configuration layer to handle copy, specific business logic, and feature flagging across the auto, homeowners, and renters verticals to speed up engineering deliveries
- Built a React micro-frontend architecture using CI/CD pipelines and single-spa, enabling seamless vertical switching across all partner storefronts and ephemeral sandbox environments for code review
- Built new microservices and tooling in Deno, React, and AWS to solve key engineering pain points for multi-partner / multi-state PDF generation and email deliverability
- Improved Sentry and Datadog observability by enhancing stack trace context, refining error grouping, and implementing auto-team assignment for bug alerts - transforming vague errors into immediately routable incidents

Software Engineer | 11/2020 - 02/2022

React, Redux, Next.js, CSS, Cypress, Jest, RESTful API

- Built core quote and policy coverage components for new auto insurance regions based on Figma designs and PRDs, expanding Toggle Auto to 15+ states serving thousands of active policyholders
- Implemented pixel-perfect CSS and responsive UI for entirely new partner storefronts including Toyota and Carvana
- Integrated Segment and Google Analytics event tracking across new user flows to support data-driven product decisions
- Built the foundational Vanilla CSS / Preact plugin for Shopify storefronts, enabling 10+ live storefronts to sell insurance coverage and establishing the architecture for engineers to scale the integration further

NASA - Jet Propulsion Laboratory | Hybrid | 10/2018 - 10/2020

Enterprise Application Software Engineer II

AGILE, AWS, Django, DRF, Docker, CI/CD (Drone), Kubernetes, React, Highcharts, Jest, Postgres

- Built a full stack Django and React waiver application to digitize paper-based JPL document workflows, reducing signing turnaround from weeks to same-day for projects including MARS2020 and Europa Clipper
- Engineered a CRON and queue cloud-based application to retrieve 1,000+ monthly review records from 4 JPL systems and consolidate them into a single centralized dashboard
- Developed CI/CD pipelines for various applications to enable continuous deployment and monitoring
- Enforced linting, code review, and unit testing standards to reduce bugs and improve long-term maintainability

EDUCATION

Claremont McKenna College - B.A. Computer Science / Philosophy | 05/2018

Hackathons: Sure AI Hackathon 2025 - 3rd Place
